Bayer CropScience Pastora Herbicide at 1.0 to 1.5 ounces per acre may be used for suppression of KR bluestem. Applications made to weeds that are under environmental stress (such as drought) may result in unsatisfactory results.

A repeat application 4 to 8 weeks after the first application is the best approach for an improved level of suppression. Do not apply more than 2.5 ounces of Pastora Herbicide per acre per year.

The addition of a nonionic surfactant (NIS) at 0.25% to 0.5% v/v (1 to 2 quarts per 100 gallons of spray) or crop oil concentrate (COC) at 1% v/v (1 gallon per 100 gallons of spray) to Pastora Herbicide is required.
