

APPLICATION INSTRUCTIONS

FOR SOIL APPLICATION

KEYLATE Zinc can be incorporated in liquid fertilizer or applied separately. Apply the following rates if you do not have a soil or leaf analysis.

Maintenance application: 1 quart per acre
Moderate Micronutrient Deficiency: 2 to 3 quarts per acre
Heavy Micronutrient Deficiency: 4 to 5 quarts per acre

If you have a soil or leaf analysis recommendation, apply KEYLATE Zinc at the following rates:

Elemental zinc required by soil/leaf test	Quarts of KEYLATE Zinc	Pounds of KEYLATE Zinc
1 lb	0.36	1.0
2 lbs	0.72	2.0
3 lbs	1.08	3.0
4 lbs	1.44	4.0
5 lbs	1.80	5.0
6 lbs	2.16	6.0
7 lbs	2.50	7.0
8 lbs	2.88	8.0
9 lbs	3.24	9.0
10 lbs	3.60	10.0

FOR FOLIAR SPRAY APPLICATION

Vegetables: Apply 0.5 quart per acre (1.2 liters per hectare) each spray. KEYLATE Zinc can be incorporated in the normal spray program.

Field Crops: Apply 1 quart per acre (2.3 liters per hectare) when plants are young. This is the time when most severe deficiencies occur.

** Do not exceed one quart per acre for foliar sprays per application on above crops.*

Tree Crops: Apply 4 quarts of KEYLATE Zinc in 500 gallons of dilute spray (10 ltr. per 2000 ltr.). If concentrated spray is used, increase the concentration in direct proportion to dilution. If tree crops are sprayed several times a year, the above amount can be split into more numerous applications. Split applications over the year are considered more beneficial than single applications.

KEYLATE Zinc will disperse in water with little agitation. Many pesticides can be added and applied while spraying KEYLATE Zinc. Follow this mixing sequence: 1. Water 2. KEYLATE Zinc 3. Pesticide

When foliar spraying KEYLATE Zinc through a conventional sprayer, use a minimum of 20 gallons of water per acre (180 liters per hectare). When foliar spraying KEYLATE Zinc with low volume equipment, 5 gallons of water per acre (45 liters per hectare) is usually sufficient. If less water is used, slight burning of the foliage may occur. A maximum of 0.5 gallons per acre per application is recommended. Aerial applications should not exceed 1 quart per gallon (1 liter per 4 liters) of water. For best results, spray when the crop is in an active growing state, after irrigation or rainfall. Spray early in the morning or late afternoon. The addition of 0.5% (total solution) of nitrogen solution, ammonium sulfate, or L.B. Urea may aid leaf absorption. Foliar fertilization is intended as a supplement to a regular fertilization program and will not, by itself provide all the nutrient normally required by agricultural crops.

KEYLATE® Zinc

GUARANTEED ANALYSIS

Zinc (Zn) 9%
9% Chelated Zinc

Derived from zinc oxide, chelated with ethanol,
2-amino-2-hydroxy-1,2,3-propanetricarboxylate

GENERAL INFORMATION

KEYLATE Zinc is formulated to be used in fertilizer solutions. Broadcast or row applications are acceptable, although greater efficiency may be expected from row applications. Micronutrient deficiencies usually occur when plants are small; therefore, micronutrients should be added to the fertilizer at or before planting.

STORAGE INSTRUCTIONS

Keylate Micronutrients are chelates with low corrosivity. It is recommended that keylates (9% Zn, 5% Fe, 5% Mn, 5% Cu) be stored in fiberglass, polyethylene or polyolefin. We recommend storing pails a maximum of three pails high. Do not stack pallets.

CAUTION: KEEP OUT OF REACH OF CHILDREN

WARNING: Harmful if swallowed. Avoid breathing spray mist. May cause irritation of nose, throat and/or skin. Avoid contact with eyes, skin and clothing. If swallowed: Induce vomiting by sticking finger down throat. Never give anything to an unconscious person. Get medical attention. If in eyes: Wash eyes with plenty of clear water for at least 15 minutes. Get medical attention.
