

# NUE Carbo Chelate

## 0-0-5 Guaranteed Analysis

### PLANT FOOD INGREDIENTS

**Soluble Potash (K<sub>2</sub>O).....5.00%**

Derived from potassium carbonate

### NON-PLANT INGREDIENTS

**Carboxylic Acids .....10.00%**

**Hydroxycarboxylic Acids.....11.00%**

**Glucometasaccharinic Acids .....14.00%**

Derived from composted sawdust, fermentation & chemically modified sugars, & lactic acid.

### GENERAL INFORMATION

NUE CARBO-Chelate is a blend of naturally produced organic and amino acids designed for chelation of soil & foliar applied minerals such as Ca, Cu, Fe, Mg, Mn & Zn.

NUE CARBO-Chelate can be used as an aid for the prevention of precipitation of minerals in the spray tank.

### DIRECTIONS FOR USE

**Mixing Directions** - Be sure spray tank is thoroughly cleaned, fill ½ full with clean water, add required amount of NUE CARBO-Chelate. Begin agitation, and minerals first; add balance of water and then NPK solution. Always add NPK solution last.

**Compatibility** - Due to the variability of NPK products and mineral sources, it is recommended to check compatibility in all spray combinations by a simple jar test with appropriate concentrations in lieu of published data. In the event of precipitation, additional NUE CARBO-Chelate may be needed. Prolonged storage of NPK and/or mineral combinations with NUE CARBO-Chelate is not recommended.

**Dilution and Spray Volumes** - Always use enough water for uniform application and to prevent possible plant tissue damage to the intended crop from concentrated droplets.

**Containers:** Triple rinse. Dispose of containers only in a manner approved by local and state authorities.

### SUGGESTED APPLICATIONS

**Soil Applications:** 1 to 4 gallons per acre in pop-up, side-dressed, side-banded or starter fertilizers. Can be water run with any liquid fertilizer application. 2-gallon rates should be spread out over 3-4 applications for most effectiveness. **128 to 512 ozs/acre on Soil**

**Foliar Applications:** NUE CARBO-Chelate is designed for increased mineral translocation and uptake. It should be used at 1 to 4 quarts per acre in additions to any mineral foliar – Ca, Mg, Zn, Mn, Cu, Fe, Co, Mo & B. **32 to 128 ozs/acre as Foliar**

NUE Chelate is also a trace mineral compatibility agent. It can be used to blend liquid phosphate fertilizers with trace elements such as Ca, Mg, Zn, Mn, Cu & Fe.

Each NPK & Trace mineral blend requires specific amounts of NUE Carbo-Chelate for optimum chelation, compatibility and cost.

Please call Bio-Gro, Inc. at 1-509-894-4110 and we will lab test your specific blend. Allow 2-3 days so that the sample(s) can be allowed to stand 1-2 days.

### FOR MANUFACTURING USE ONLY

**WARNING:** NUE Chelate may lower the pH of spray solutions. Although organic acids help protect against nutrient phytotoxicity, spraying a low pH mineral solutions (especially Zn) can cause damage to mineral sensitive plant tissues. COPPER Fungicides can also become phytotoxic in low pH sprays. CHECK pH!

### CONDITIONS OF SALE

Seller and/or manufacturer warrants only that this product consists of the ingredients specified on this label. No one is hereby authorized to make any warranty and/or guarantee concerning the use of this product. Being that the use, timing, placement, rate, application and other conditions are beyond the control of the seller and/or manufacturer, the seller's and/or manufacturer's liability for handling, storage and use of this product is limited to replacement of product or refund of purchase price.
