Adjuvant Recommendation for use with Cheetah Herbicide:

This is a recommendation of FIFRA Section 2(ee) as it relates to the use of Cheetah Herbicide tank mixed with adjuvants.

Last Chance™ may be used at 0.25-0.5% v/v in combination with Ammonium Sulfate at 1.5 to 3 pounds per acre. Adjuvant rates are dependent on tank mix partners, temperatures, environmental conditions and potential for leaf burn.

The combination of Last Chance and Ammonium Sulfate have been shown to improve weed control of difficult to control weeds.

The user must refer to the label for both products and read and follow all directions for use, restrictions, and precautions.
