

| Avocado |

Danitol[®] Insecticide offers unsurpassed control of avocado damaging pests to help maximize the market value and defend the integrity of the orchard.

- Controls thrips, mites, and red bay ambrosia beetle (RAB), a vector of a fungus which causes laurel wilt disease in avocado trees
- Offers a new mode of action for avocado pest management
- Short re-entry and pre-harvest Intervals

Avocado Thrips Control

Large Plot Avocado Thrips Study – Somis, CA – 2009

All insecticide treatments applied with oil at 1% v/v ; Source: David Holden (Holden Research and Consulting)

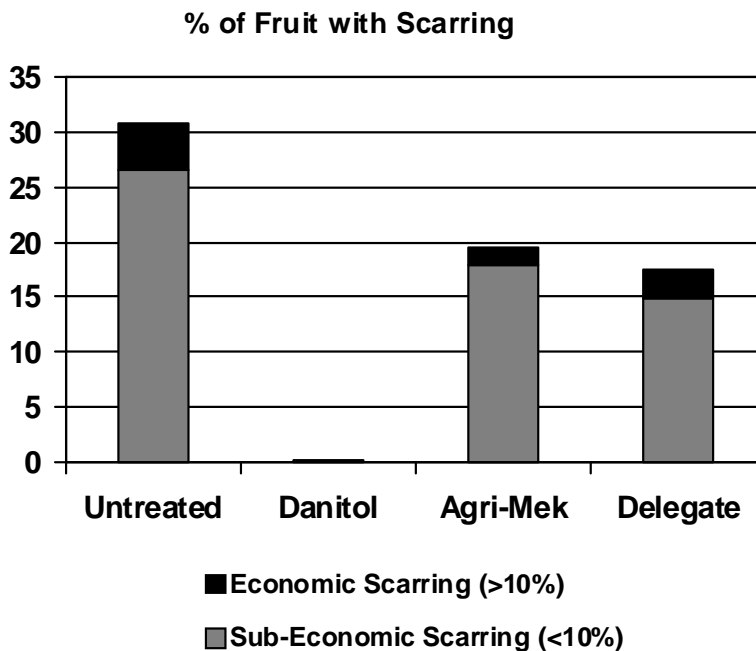

How To Use

Rate	16.0 to 21.33 fl oz/A
Timing	Apply when first pest activity is noticed.
Method	Ground or Air
Spray volume	Minimum of 100 gal/A by ground and minimum 50 gal/A by air; If a spray oil is added do not exceed 1%v/v of a 415 Spray Oil. Do not add heavier spray oils. Ensure proper agitation is maintained for uniform distribution in the spray.
PHI / REI	1 day / 24 hours
Harvest PPE	Within 7 days of application, workers who re-enter for the purpose of harvest should wear coveralls, chemical resistant gloves such as barrier laminate or Viton >= 14 mil, socks plus shoes and, if laborer will be in contact with foliage face protection and protective eyewear must also be worn.

Other Important Information

- Maximum 42-2/3 fl oz/A (0.8 lb ai) per acre per season.
- For resistance management, always rotate with other modes of action.
- *Danitol* is toxic to bees; do not apply product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.
