### GENERAL INFORMATION

LINK® B3 is designed primarily for foliar applications to prevent or correct boron deficiencies in a wide range of agronomic and ornamental plants. Its use is suggested as a supplement to a regular, balanced fertilizer program to enhance yields and improve quality.

Application of LINK B3 is a means of obtaining a quick response to needed elements. Foliar applications of LINK B3 may be particularly beneficial during periods of peak nutrient demand, for crops grown on soils having poor nutrient availability or to crops suffering from a weakened root system.

LINK products are formulated specifically for the professional market including greenhouse, field and container grown nursery, sports turf, and landscape maintenance managers. LINK B3 should be used as part of a comprehensive Total Nutrition System® for optimizing plant growth, development and quality.

### DIRECTIONS FOR USE

LINK B3 may be applied as a foliar spray by air, ground concentrate or dilute. Maintain agitation to provide uniform distribution within spray tank. Use of a high quality CPDA approved spreader, such as R-11®, at recommended rates to improve spray cover is usually advised. Do not apply when plants are under excessive heat or moisture stress.

**AS A FOLIAR SPRAY:** For best results, apply early in the morning or late in the evening. Do not apply during hot, dry weather or periods of drought. To reduce droplet size and enhance uniform wetting, a surfactant may be used for all foliar applications.

### DIRECTIONS FOR USE (continued)

**TURF GRASSES:** Apply 1 to 2 ounces per 1,000 sq. ft. Repeat as needed.

**SPRINKLER IRRIGATION:** Apply 1 to 2 quarts per acre with irrigation water. Use check valve to prevent backflow into water system.

This product should be used as a supplement to a regular fertility program. By itself, it will not provide all nutrients normally required by plants.

### COMPATIBILITY

Always jar test new combinations for compatibility prior to field mixing.
