

MycoApply® Micronized Endo

The goal is to create physical contact between the roots and the inoculant.

Restoration: Use 10 pounds per acre for broadcast or hydro-mulch applications, before or during planting.

Nurseries: Inoculum can be mixed into the soil before or during filling cavities, pots and trays. Use ¼ to ¾ pounds per yard. Use higher rate if filling smaller cavities.

Agriculture: Band or Mix with seed at 1 pound per acre.

Transplants: Touch damp roots to the inoculum so a small amount sticks to the roots or sprinkle into planting holes. Use ¼ teaspoon under each cutting. Potted plant: 1-2 teaspoons. Trees: ½ ounce per inch of stem caliper.
