White Label Calcium

Guaranteed Analysis

0-0-0

Calcium (Ca)6.0%

(Derived from Calcium Chloride)
Chloride not more than 11%.

General Information

White Label Calcium is a foliar or soil- applied micronutrient and is non-phytotoxic when used as directed. **White Label Calcium** is completely available and absorbed by the leaf surface or the root system.

White Label Calcium is recommended on the following crops: Alfalfa, Almonds, Avocados, Apples, Barley, All beans, Broccoli, Cabbage, Cauliflower, Carrots, Celery, Citrus, Corn, Grapes, Lettuce, Milo, Melons, Nectarines, Rice, Pears, Peaches, Pecans, Peppers, Plums, Prunes, Potatoes, Peanuts, Sorghum, Soybeans, Sugar beets, Sweet corn, Sugar cane, Strawberries, Tea, Tomatoes, Turnips, Walnuts, Watermelons, Wheat and most other crops.

CAUTION:

Keep Out Of Reach Of Children

WARNING: Harmful if swallowed. Avoid breathing spray mist. May cause irritation of nose, throat, and/ or skin. Avoid contact with eyes, skin and clothing. **IF SWALLOWED:** Induce vomiting by sticking finger down throat. Never give anything by mouth to an unconscious person. Get medical attention. **IF IN EYES:** Wash eyes with plenty of clear water for at least 15 minutes. Get medical attention.

Warning: This product contains Boron at a level that may be detrimental to growing plants. Use of Boron on crops other than those recommended may result in serious injury to those crops. Since excessive amount of boron may be toxic, contact your local agricultural authority for additional information. Prevent contact with eyes, skin or clothing by wearing protective chemical goggles and protective clothing. If exposure occurs, immediately flush exposed area with clear water for at least 15 minutes. consult a physician. If ingested do not induce vomiting, call a physician; transport to an emergency facility. Avoid breathing vapors by mixing in a well ventilated area, If inhalation occurs move to fresh air and consult a physician immediately.

Storage Instructions

We recommend when storing pails of White Label Calcium to stack a maximum of two pallets high, with each pallet two pails high.

Conditions Of Sale: 1. Seller warrants this product consists of the ingredients specified and is reasonably fit for the purpose stated on this label when used in accordance with directions under normal conditions of use. No one other than an officer of Seller is authorized to make any warranty, guarantee or direction concerning this product. 2. Because the time, place, rate of application and other conditions of use are beyond Seller's control, Seller's liability from handling, storage and use of this product is limited to replacement of product or refund of purchase price.

Foliar Spray

White label Calcium will disperse in water with little agitation. Many pesticides can be added and applied while spraying **White Label Calcium**. Follow this mixing sequence: 1. Water 2. **White Label Calcium** 3. Pesticide

Vegetables: Apply 1 pint per acre per week in the normal spray program. Increase the rate to 2 pints per acre per week prior to the time that the deficiency usually shows up.

Tree Crops: Apply 1 to 2 pints **White Label Calcium** per 100 gallons of spray. Start two to three weeks after full bloom and continue at two- week intervals. Trees must be wet thoroughly. For best results do not spray in the heat of the day. Boron may be mixed in the same spray tank after **White Label Calcium** has been added.

Peanuts: Spanish and small- seeded varieties of peanuts: 2 gallons per acre at early bloom. Florunner variety: 3 gallons per acre. The application may be split into two applications at 10 to 14- day intervals. Large seeded Virginia varieties: in addition to land plaster, apply 1 gallon per acre, two to three times at 10 to 14- day intervals beginning at early bloom.

Cotton: Apply 1 pint per acre per week or 1 quart every other week. Start treatment at early bloom. when foliar spraying White Label Calcium through conventional sprayers, use a minimum of 20 gallons of water per acre. When foliar spraying White Label Calcium with low volume equipment, 5 gallons of water per acre is usually sufficient. If less water is used, slight burning of the foliage may occur. A maximum of one- half gallon per acre per application is recommended. Aerial applications should not exceed 1 quart per gallon of water. For best results spray when the crop is in an active growing state, after irrigation or natural rain fall. Spray early in the morning or late afternoon. Mid- day sprays may not be effective because of excessive moisture evaporation. The additional of one- half percent (total solution) of nitrogen solution, ammonium sulfate, or L.B. Urea may aid leaf absorption.

White Label Calcium is compatible with most insecticide's, fungicides, foliar nutrients and herbicides. It can be applied in existing spray programs.

White Label Calcium can be applied with most herbicides. Use 1 quart per acre in banded application and 2 quarts per acre in broadcast application.

White Label Calcium is an excellent acidification agent for alkaline water. High pH water will break down many insecticides such as Toxaphene, Sevin, Dylox, Ethyl Parathion, Malathion, Methyl Parathion and all organic phosphate insecticides, decreasing the residual activity of the pesticides.

White Label Calcium is manufactured to rigid controls at the highest possible concentration for effective usage. Any residue in the this pail is water soluble. Rinse the pails with water and add solution to spray tank.
