ADMIRE[®] PRO Systemic Protectant

For post-transplant suppression of wireworm and white grub infestations in sweet potato utilizing a reduced Pre-Harvest Interval.

EPA Reg. No. 264-827
SLN No. NC-100003

24(c) Supplemental Label

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF NORTH CAROLINA

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DIRECTIONS FOR USE

Pests Controlled	Rate fluid ounces/1000 row-feet	Rate fluid ounces/Acre
Aphids Flea beetles Leafhoppers Thrips (foliage feeding thrips only) Whiteflies	0.31 – 0.74	4.4 – 10.5
Pests Suppressed		
White grubs Wireworm	0.74	10.5

Restrictions

Pre-Harvest Interval (PHI): **3 days** (leaves); **60 days** (tubers)
Maximum ADMIRE PRO allowed per crop season: **10.5 fluid ounces/Acre** (0.38 lb AI/Acre)
Maximum ADMIRE PRO applications per crop season: **1**

Application

Apply specified dosage in one of the following methods:
1. In-furrow spray (rate specified per 1000 row-feet) over planting material (hulis) or shanked-in 1 to 2 inches below hulis depth at planting;
2. Side-dress not more than 0.26 fluid ounces/1000 row-feet no later than 45 days after-planting. Observe the same PHI as above.

Notes

The rate applied affects the length of control. Use higher rates where infestations occur later in crop development, or where pest pressure is continuous. ADMIRE PRO rates less than 0.31 fluid ounces/1000 row-feet may not provide adequate residual pest control. ADMIRE PRO treated crops grown on very high organic matter soils (muck) may also require additional pest management control.

Follow these and all other Use Directions and Precautions on the package label.
