Hand Sprayer Applications For Barns

Environmentally Friendly

**Safe & Effective
Control of Insects**

ECOLOGICAL PROFILE

FlyAway[®] spray will not contaminate food or water sources. FlyAway[®] will not contaminate soil and will decompose over time into organic matter. FlyAway[®], in its diluted form has shown to be non-toxic to humans, domestic animals, birds, and livestock. FlyAway[®] has been tested for aquatic toxicity and results indicate that it will not cause harm to the aquatic environment. FlyAway[®] will not contaminate water through drift of spray or runoff.

DIRECTIONS FOR USE

FlyAway[®] is ideal for use in all barn and stall areas for fly control. Adjust number of applications per week and/or concentration according to insect pressure. Under normal conditions use 0.75% dilution rate (25 oz per 25 gallons) with an interval length of 7 to 10 days. For best product performance, it is important to spray all surfaces including floors, walls and manure collection areas.

MIXING INSTRUCTIONS

Each 25 ounce bag of FlyAway[®] makes 25 gallons of finished product. Mix the contents of the bag by hand prior to opening, then cut a corner off the top of the bag and slowly pour the contents of the bag into 25 gallons of water while agitating the water. Make sure that the pH of the water is between 6.0 to 7.0. An ideal agitator is a cordless power drill with a paint mixer attachment. Put the head of the paint mixer 8" - 12" under the water and pour the concentrate into the venturi created by the head of the paint mixer. The solution will be perfectly blended and once will not settle.

PRODUCT PERFORMANCE TIMELINE

This product targets all generations of insect development killing eggs, larvae and adults. Good control should be accomplished after two to three applications. Applications of FlyAway[®] at regular intervals of approximately one week and started early in the fly season will help maintain control.

WARNINGS

Eyes of livestock should always be protected from spray to avoid possible irritation. See label for complete instructions. If your sprayer has been using a pyrethrum based solution there may be some brown sticky residue remaining in the lines and spray nozzle. FlyAway[®] may cause this residue to break away and could cause the nozzle to clog. It is easy to remove this material by cleaning this residue from any clogged nozzle. After a short time of using FlyAway[®] the system will be clean as the product will NOT clog when used correctly. The product is water soluble and can easily be blown out of a system using plain water.

FlyAway[®] ingredients meet the Program Standards set forth by the National Organic Program (NOP) final rule 7CFR Part 205.

This product has not been registered by the US Environmental Protection Agency. USAgriTech, Inc. represents that this product qualifies for exemption from registration under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA).

FlyAway[®] is a contact herbal insecticide made of 100% natural and organic ingredients and has proven effective and safe to use. FlyAway[®] is ideally suited for both indoor and outdoor use.
