Directions For Use

Use Aim EC herbicide for control or suppression of certain labeled annual broadleaf weeds that are less than 4" in height or rosettes are less than 3" in diameter. Thorough application coverage is essential for weed control. Leaf speckling may occur with this product because it is a contact only herbicide; however, no crop loss is expected.

Spray Drift

Avoid spray drift to any other crop and other non-target areas. Do not apply when weather conditions may cause this product to drift. Drift may result in injury to other non-target crops and vegetation, in the form of leaf speckling and necrosis. Always avoid spray drift by, not applying aerially when wind speed is greater than 10 mph or during periods of known temperature inversions or any other environmental interactions that may cause drift. Use of larger droplet sizes can also potentially reduce spray drift. Avoiding spray drift at the application target site is the responsibility of the pesticide applicator.

Aim EC Use Rates

Apply Aim EC 1 to 2 fl. oz. per acre

Adjuvant Recommendation

Crop oil concentrate (COC) or non-ionic surfactant (NIS) is recommended for optimum broadleaf weed control. COC adjuvants will improve weed control but may also increase the chance of crop injury. Use COC with caution. Follow adjuvant manufacturer's recommended use application rates. Read and follow all label directions for each tank mix product. Always use in accordance with the most restrictive of label precautions and limitations.

Coverage is essential for satisfactory performance.
