

# COMPATIBILITY AGENT

## General Information

### DIRECTIONS FOR USE

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible.

DuPont TPQ89 must be used only in accordance with instructions on this label or in separate published DuPont directions.

DuPont will not be responsible for losses or damages resulting from the use of this product in any manner not specified by DuPont.

Do not apply this product through any type of irrigation system.

### PRODUCT INFORMATION

TPQ89 is a spray adjuvant designed to improve spray ability of herbicides containing the active ingredient tribenuron methyl such a DuPont Express herbicide (with TotalSol soluble granules) and DuPont Panoflex herbicide (with TotalSol soluble granules) when tank mixed with glyphosate containing herbicides.

## Limitations, Restrictions, and Exceptions

### APPLICATION INFORMATION

#### TANK MIX PREPARATION

1. For the first load, add clean water to the tank. When the tank is approximately 20% filled, add the tribenuron methyl containing herbicide (see listing above) and allow 2 to 4 minutes of agitation to fully dissolve the product. If there is a heel in the tank, the tribenuron methyl containing herbicide should be pre-dissolved in a bucket of fresh water before addition to the tank.
2. AFTER the soluble granules are fully dissolved, add 1 pint of TPQ89 for each 250 gallons of spray solution, or 1 quart of TPQ89 for each 500 gallons of spray solution, or 2 quarts of TPQ89 for each 1000 gallons of spray solution. Allow this to mix thoroughly into the spray solution.
3. If ammonium sulfate is being used, it should be added after the TPQ89.
4. The glyphosate containing herbicide should be added to the tank last.

It is important that the tribenuron methyl containing herbicide be fully dissolved before the TPQ89 is added to the spray solution.

It is important that the TPQ89 is added to the spray solution before the ammonium sulfate or the glyphosate containing herbicide.

Please refer to herbicide product labels for tank clean-out guidance or any other restrictions or requirements.
