

FERTIGATION

General Information

For use as a fertilizer in foliar and fertigation applications to supplement phosphorus, potassium, nitrogen, sulfur, manganese and zinc levels on agricultural crops

DIRECTIONS FOR USE (Use only as Directed):

- Exercise caution with foliar applications in extreme weather conditions such as high temperatures and poor drying conditions.
- Aerial application – minimum of 5 gallons of water/acre; Dilute sprays – minimum of 20 gallons of water/acre. Apply with sufficient water to deliver spray uniformly on leaf surfaces. Higher volumes of water should be used for higher rates of fertilizer.
- Exercise caution when applying to any crop during bloom, as many factors can affect fruit set and final fruit quality.
- TruPhos ManZin is compatible with most agricultural chemicals and nutrients. Not compatible with aluminum equipment. Should be applied in conjunction with tissue and/or soil analysis.
- Application rates vary according to specific crop requirements, management objectives, soil nutrient availability and/or environmental conditions.
- Consult a NutriAg representative for specific crop recommendations, application timings and necessity of its use.

ATTENTION: The use of this fertilizing material on any crops other than those recommended may result in serious injury to the crops.

Limitations, Restrictions, and Exceptions

FERTIGATION RATES: Always apply toward the end of an irrigation cycle.
