

GREENING TURF NUTRITIONAL - TO CORRECT DEFICIENCIES

General Information

Birdie is a concentrated technical spray nutritional, manufactured in a patented, high temperature, homogeneous process, that directly acts symbiotically by increasing chlorophyll production, for the rapid synthesis, uptake and duration of Iron greening nutrition. Plant immune systems are activated, to promote healthy, vigorous meristematic new growth, minimizing interveinal chlorosis. Apply as a foliar spray, with either ground sprayers or applicators, including chemigation. Combinations with other agricultural chemicals, including other liquid plant nutrients, and pesticides, allow for application efficiency. A small jar compatibility test should first be made before making larger scale tank mixes and applications.

Limited Warranty NOTICE: Under most conditions, Birdie can be applied as recommended; however, many contingent risk factors may exist and crop injury is always a possibility whenever foliar sprays are applied to crops. Manufacturer and seller warrants that this product conforms only to its chemical description as stated on the label only, and that this product is reasonable fit for the purpose stated on the label when used in accordance with the label directions and instructions under normal conditions of use. Neither this warranty of merchantability or fitness for a particular purpose, expressed or implied extends to the use of this product contrary to label instructions or under abnormal conditions or under conditions not reasonably foreseeable to the seller, and applicator assumes all risks.

Limitations, Restrictions, and Exceptions

Store at temperatures above 50°F.
