

## HAND APPLICATION

### General Information

#### DIRECTIONS FOR USE

USE RESTRICTIONS: This product may only be used in underground applications to control Plains Pocket Gophers (*Geomys bursarius*) and Northern Pocket Gophers (*Thomomys talpoides*) in subterranean applications on rangeland, pasture, cropland, and noncrop areas. This product must be applied, using methods prescribed on the label, directly into pocket gophers' underground tunnels or into artificial burrow systems made by burrow-builder machines. **DO NOT PLACE BAIT ON OR ABOVE THE GROUND SURFACE. DO NOT APPLY THIS PRODUCT OVER FOOD OR FEED CROPS.** Do not apply this product in a way that will contact workers, other persons, pets, or domestic animals. Keep pets and other people out of the area during application. Do not use this product in California.

#### Limitations, Restrictions, and Exceptions

HAND APPLICATION: Remove burrow plug from flat side of burrow fan or locate main underground runway by probing about 15 inches away from mound, starting on flat side of burrow fan. A sudden drop in the soil's resistance indicates that the main runway has been found. Using a long-handled spoon or other suitable implement, insert one teaspoon of bait into the runway. Close opening with sod, soil, or a rock, taking care to block the entry of light. Do not permit soil to cover bait. Depending upon pocket gopher population levels, one pound of bait applied by hand will treat one to eight acres. Before using, see further instructions pertaining to this application method on the sheet of paper attached to the end of the bag.
