

PEACHES, NECTARINES, APRICOTS, PLUMS, PRUNES, CHERRIES AND OTHER FRUITS

General Information

DIRECTIONS FOR USE

METHOD OF APPLICATION: To disrupt mating of the peach twig borer moth on peaches, nectarines, apricots, plums, prunes, cherries and other stone fruits; and those other crops where the peach twig borer moth is a pest apply CheckMate PTB-F at 1.95 fluid ounces (57.67 ml) product per acre (10 gm a.i./acre) to 7.80 fluid ounces (230.68 ml) product per acre (40 gm a.i./acre). Do not exceed 29.24 fluid ounces (863.56 ml) product/acre/year (150 gm a.i./acre/year).

Ground Equipment: Apply CheckMate PTB-F in sufficient water for uniform coverage. Do not apply to point of runoff. Apply to foliage directly.

Aerial Equipment: Apply CheckMate PTB-F in sufficient water for uniform coverage.

APPLICATION NOTES: Reapply as needed based on insect monitoring and field scouting programs. The use of approved stickers improves the adherence to the leaf surface and protection from rainfall. In the event of rain, re-treatment may be required if approved stickers are not used. This product is not recommended in fields with overhead irrigation. This product only affects adult male moths and will have no effect on female moths, eggs or larvae. If application occurs following biofix or during the growing season, the field must be treated with insecticide treatments that will effectively control hatching larvae until egg laying by previously mated female moths has ceased to occur. In moderate to high insect pressure situations, supplemental insecticide applications during the season can prove necessary to provide adequate protection to the developing crop. These supplemental insecticide applications should be made based on trap monitoring, field scouting, and appropriate degree-day models for the local growing area and must be timed to control emerging larvae.
