

WALNUTS

General Information

GENERAL INFORMATION

CALMAX® FOR NUTS is a water-soluble foliar nutritional fertilizer of macro and micronutrients. It is designed for foliar application and may be applied alone or in tank mixes containing pesticides. However, when use of an unfamiliar mix is made, a compatibility test is always recommended. Foliar fertilization is a supplement to a regular fertilizer program and will not supply the total nutrients required by a crop. CALMAX FOR NUTS is recommended as foliar nutrition to be applied to crops where disorders due to insufficient calcium are anticipated.

DIRECTIONS FOR USE

Dissolve the desired amount of CALMAX FOR NUTS in water before adding to the spray tank. With proper agitation running, add CALMAX FOR NUTS into the spray tank. Add CALMAX FOR NUTS to the spray tank before adding pesticides.

Rates recommended are for standard spray volumes of 50-150 gal/acre (500-1,500 liters/ha). For higher volume sprays, rate should be adjusted. Caution: Store CALMAX FOR NUTS in temperatures between 41° F to 104° F and avoid extreme variations in temperature. A reversible separation of ingredients may occur after long storage, this however does not affect quality or effectiveness of the product.

Limitations, Restrictions, and Exceptions

WALNUTS

PURPOSE - To Decrease Drop of Immature Nutlets.

NUMBER AND TIMING OF APPLICATIONS - 2-3 applications starting at bud swell through early set.

Method

Foliar spray
