

## **FIELD CROPS: ALFALFA, BARLEY, BEANS, ETC.**

### General Information

#### GENERAL DIRECTIONS

VineAgra® is a concentrated plant food that supplies plant available potassium. Developed to be applied to plant foliage or soil as a fertilizer. Application as a foliage spray may be alone or in combination with an insecticide, fungicide or PGR sprays. VineAgra can be applied by air or ground with a minimum of 10 gallons of water and with sufficient water for good coverage. When mixing, VineAgra should be added and mixed into the tank first. A high quality non-ionic surfactant should always be included in the foliar spray for even deposition and distribution.

**PRECAUTIONS COMPATIBILITY** VineAgra is compatible with most pesticides and fertilizers except products containing calcium and highly acidic materials. A compatibility test is recommended if the combination has not been used before.

#### Limitations, Restrictions, and Exceptions

Apply 0.5 to 2 gallons per acre per application. For best results, make 2 applications per season beginning at 3 to 6 leaf stage and again at prebloom. For alfalfa seed, beans, safflower, peanuts and peas and all crops grown for seed make a 3rd application within 2 to 3 weeks. For cotton, make a 3rd at late bloom. For sugar beets, make continuous applications at 10 to 15 day intervals beginning at 3 to 6 leaf stage.
