

GENERAL USE, PH REDUCTION AND BUFFERING STANDARD

General Information

GENERAL INFORMATION

SPEEDWAY is a multi-function spray activator for glyphosate and certain other post-emergent herbicide, defoliant and dessicant sprays. SPEEDWAY can replace ammonium sulfate in glyphosate applications. It is designed to condition spray water which may lead to increased pesticide activity and improved absorption into leaf surfaces. SPEEDWAY contains a proprietary blend of powerful buffering, sequestering and water conditioning agents designed to improve the characteristics of hard water and neutralize metal cations.

SPEEDWAY may be used where water conditioning may positively affect pesticide performance. SPEEDWAY is compatible with most ammonium nitrogen sources, including 32-0-0, 10-34-0 and ammonium sulfate. In some cases, additional ammonium nitrogen may be added to the spray tank to meet specific pesticide label requirements. SPEEDWAY does not replace a surfactant. If the pesticide label requires a surfactant, use CHEM-SURF at recommended rate. The efficacy of SPEEDWAY and the effects of the spray application may be affected by various environmental factors and the condition and operation of the sprayer. Periodic calibration of spray equipment and visual inspection of the spray application may necessitate an adjustment of the adjuvant rate.

When used according to the Directions for Use, SPEEDWAY is compatible with all glyphosate formulations and many other pesticides and fertilizers.

Do not use with sulfonyleurea herbicides. Maintain good equipment hygiene by cleaning pumps, lines and tanks after using this product.
