

FOLIAR SPRAY

General Information

Information

Dyna Green Peanut, Cotton & Soybean Mix is a concentrated formulation for both foliar and use in fluid fertilizers. Caution: Do not use in a tank mix with high polyphosphate products such as 10-34-0. For foliar application Dyna Green Peanut, Cotton & Soybean Mix should be added to spray tank first and will aid in lowering the water pH. Check compatibilities of untried chemical mixes. The addition of a non-ionic surfactant will help leaf absorption.

Limitations, Restrictions, and Exceptions

Foliar Spray: Dyna Green Peanut, Cotton & Soybean Mix will disperse in water with minimal agitation, and may be applied with most pesticides. Apply 1-3 quarts per acre in enough water to cover through conventional sprayers, and with low volume equipment use 1 quart per acre in at least 5 gallons of water per acre and a non-ionic surfactant such as Active 80.
