

DEFOLIANTS, DESICCANTS

General Information

GENERAL INFORMATION

CROP OIL is a combination of surfactants and superior paraffinic oil designed for use with agricultural chemical spray programs to optimize product performance by increasing penetration into the leaf surface, giving more uniform wetting and more uniform distribution of the active material. Provides improved retention of pesticide deposits under adverse weather conditions.

GENERAL RECOMMENDATIONS FOR USE

NOTE: Maintain constant agitation of the spray mixture during standing and application to assure uniform pesticide application.

Use when the crop is actively growing. CROP OIL should not be used with any product whose label recommends against the use of an adjuvant.

Note: The above use recommendations are considered to be adequate for most uses. Some pesticides, however, may require higher rates for optimum effect. Follow the pesticide label directions when this occurs. However, do not add this product at a rate which exceeds 2% of the finished spray volume.

Limitations, Restrictions, and Exceptions

Defoliants, Desiccants: Use 1 to 4 pints of CROP OIL per acre in combination with the recommended defoliant or desiccant.
