

BARN CLEANING

General Information

BioSentry Acid-a-Foam Cleaner and Descaler is used as an alternative to regular hatchery, equipment or barn cleaner to remove detergent residues, mineral scale and other hard-to-remove elements. A clean surface is required for complete disinfection. Alternating between a good alkaline detergent and a good acid-based detergent maximizes surface cleanliness and, therefore, prepares the surface for the second step of disinfection. BioSentry Acid-a-Foam Cleaner and Descaler removes dirt, grime, protein and oils as well as minerals and adherent films.

RECOMMENDED AREAS OF USE

POULTRY HATCHERIES: Walls, floors, ceilings of rooms, setters and hatchers. Manual cleaning of trays, racks, plastic flats, boxes.

FARM USES: As a general cleaner and deodorizer in poultry houses, swine and livestock barns, and as a wetting agent to wash down poultry houses, swine and livestock barns.

FOOD PROCESSING PLANTS: Use on floors, walls and shelves, utensils and walk-in-coolers. It cleans and brightens stainless steel, glass, plastic, concrete and tile in poultry, meat and canning plants.

Limitations, Restrictions, and Exceptions

BARN CLEANING:

Use 0.25 - 0.5 % solution of BioSentry Acid-a-Foam Cleaner and Descaler (1 gallon per 300 - 400 gallons of wash water) (1L / 300 - 400L) for cleaning. Apply to surfaces and, if possible, let stand for 10 - 15 minutes before thoroughly rinsing all surfaces with clean water at high pressure. After thorough cleaning, let surfaces dry as much as possible and then follow-up with an appropriate disinfecting solution. Consult a BioSentry Technical Representative for recommendations.
