

RATE OF APPLICATION

General Information

DIRECTIONS FOR USE

FOAM FIGHTER is designed to reduce foam in agricultural chemical sprayers and also in dip tanks, such as those used in the grading of Peaches and Apples.

FOAM FIGHTER is not for aquatic use in Washington.

Limitations, Restrictions, and Exceptions

RATE OF APPLICATION:

Use 1 to 3 squirts whenever it is necessary to reduce foam in the tank. Foam develops in spray tanks when highly emulsified agricultural chemicals and surfactants are placed in the spray tank during the filling and agitating operation. When the spray tank is more than half full, many times a large amount of foam will almost fill the balance of the tank. In order to complete the filling operation of the tank, the foam must be removed. This is the time to use FOAM FIGHTER.
