

VEGETABLE CROPS

General Information

GENERAL INFORMATION

VAPOR GARD is a water emulsifiable organic concentrate for use on plants to reduce water transpiration. The soft, flexible film formed after the spray application dries, will significantly reduce moisture lost by the plant foliage.

All anti-transpirant spray applications must be applied for full coverage. Spray VAPOR GARD for full coverage or use as a dip. No additional spreader is needed with VAPOR GARD. Apply VAPOR GARD at least one hour, during daylight, before an anticipated rain. Sunlight for this time period, is needed for the protective film to set. VAPOR GARD dries on plants to form a clear, glossy film which retards normal moisture loss without interfering with plant growth or normal respiration. VAPOR GARD beautifies plants by polishing leaf surfaces.

DIRECTIONS

Can Be Used On All Growing Plants Including: Trees (Deciduous and Conifers); Evergreens; Christmas Trees; Shrubs; Turf; Roses; Flowering Plants; Vegetable, Tobacco and Fruit and Nut Trees. Apply VAPOR GARD alone. CAUTION: Do Not apply in spray tank combination with any pesticide, on any crop.

Limitations, Restrictions, and Exceptions

VEGETABLE CROPS (Such as Tomatoes, Peppers, Melons and other cucurbits, Beans and others): To help increase fruit size, apply VAPOR GARD at the rate of 1 gallon per acre in a full coverage spray. This application should be made early in the fruiting season. Frequently, extra benefits can be obtained, such as improved color on tomatoes and improved flavor in melons. Do Not apply with any pesticide.
