

SOIL APPLICATION - PRE-PLANT INCORPORATED

General Information

Rhyzoburst Gold 8-28-3 is a liquid plant food developed for use as a soil applied and/or starter fertilizer applied with the seed or in the transplant water. Nitrogen, phosphate, and potash help stimulate early root development, plant growth, and fruit set. Rhyzoburst Gold 8-28-3 should be used as the foundation for a balanced nutritional program.

GENERAL USE DIRECTIONS

Rhyzoburst Gold 8-28-3 is designed to maximize nutrient availability in the soil rhizosphere. For best results, concentrate Rhyzoburst Gold 8-28-3 in a pre-plant or side-dress application, It can also be used during the growing season through controlled irrigation systems that do not allow water source contamination from backflow. When applied through an irrigation system Rhyzoburst must be injected after sand media filters. Rhyzoburst Gold 8-28-3 has been formulated to provide NPK nutrients to a wide range of crops. Growing conditions may vary rates, timing, and application methods. Use caution when applying to drier, sandy soils. Contact your crop advisor for specific recommendations.

Limitations, Restrictions, and Exceptions

SOIL APPLICATION

General use rates are 1-30 gallons per acre through the growing season. Your crop advisor can provide the best advice for application rates that fit local conditions.

PRE-PLANT INCORPORATED: Apply 5-30 gallons per acre in the soil prior to planting per crop advisor recommendation to meet fertility needs.
