

SOIL APPLICATION - ORCHARD AND VINEYARDS

General Information

GENERAL INFORMATION

HUMIC ACID 10% is an auxiliary soil and plant substance for organic use, which can be combined with other fertilizers or can be applied directly to the soil. HUMIC ACID 10% is non-phytotoxic when used as directed.

CAUTION: Use caution when handling. HUMIC ACID 10% may not be compatible with all organic fertilizer mixes. Always check compatibility with other products prior to use. Do not apply with calcium based fertilizers. Fertilizer solutions with a pH of 4 or less may not be compatible. Combining with liquid fertilizer solutions is more effective if done at a blending plant.

CAUTION: Foliar application of HUMIC ACID 10% close to harvest may leave a brown residue on the harvestable portion of the crop. Rainfall, sprinkler irrigation or high humidity should alleviate this condition.

Limitations, Restrictions, and Exceptions

SOIL APPLICATION RATES

HUMIC ACID 10% may be applied pre-plant, as a starter, side dress, fertigated, top dressed or banded to the soil. To apply alone, dilute with water to ensure uniform distribution. May be used as a pop-up or in furrow at 2 qts - 3 gpa.

ORCHARDS & VINEYARDS: Injected 3-5" deep at the drip line or surface band and water into the soil. Repeat applications may be beneficial.
