

FERTIGATION APPLICATION - TRANSPLANT WATER - ALL CROPS

General Information

GENERAL INFORMATION

HUMIC ACID 10% is an auxiliary soil and plant substance for organic use, which can be combined with other fertilizers or can be applied directly to the soil. HUMIC ACID 10% is non-phytotoxic when used as directed.

CAUTION: Use caution when handling. HUMIC ACID 10% may not be compatible with all organic fertilizer mixes. Always check compatibility with other products prior to use. Do not apply with calcium based fertilizers. Fertilizer solutions with a pH of 4 or less may not be compatible. Combining with liquid fertilizer solutions is more effective if done at a blending plant.

CAUTION: Foliar application of HUMIC ACID 10% close to harvest may leave a brown residue on the harvestable portion of the crop. Rainfall, sprinkler irrigation or high humidity should alleviate this condition.

Limitations, Restrictions, and Exceptions

FERTIGATION APPLICATION

APPLICATION THROUGH DRIP IRRIGATION - inject after irrigation filter.

TRANSPLANT WATER - ALL CROPS: Use 1 to 10 gallons per acre not to exceed a 3% solution of HUMIC ACID 10% to water.
