

COMMERCIAL USE: FOLIAR

General Information

OrCa D.L. is designed for foliar use on all crops to correct calcium deficiencies. Proper nutrient management will help maximize crop quality and yield. Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops.

Limitations, Restrictions, and Exceptions

- Do not apply during the “sunlight” hours when air temperature is above 85°F. Do not apply to fruiting crops between bloom and 6 weeks after petal fall, under cold or slow drying conditions.

Mixing: If you have any questions regarding mixing or application rates contact your Agro-K dealer before using this product. OrCa D.L. may be mixed with most fertilizers, insecticides and/or fungicides. A compatibility check is recommended. Check with your field representative for specific recommendations.
