

## **FOLIAR APPLICATION**

### General Information

Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops.

### APPLICATION PRECAUTIONS:

#### Tank Mixes

System-MN is compatible with many fertilizers and pesticides but a compatibility check is always recommended. Fill the tank 1/2 to 2/3 with water and begin agitation and add tank-mix partner products (surfactants, pesticides, etc.) to the tank based on manufacturer labeled instructions. Mixing order will depend on the tank-mix partners. If the tank-mix partners are sensitive to high pH, add System-MN first to lower the pH of the spray solution. If the tank-mix partners are sensitive to low pH solutions, add System-MN last and spray immediately after mixing. For adjuvants refer the tank-mix partner labels for the proper mixing order and adjuvant selection. Do not mix System-MN with fixed copper-based fungicides. Do not apply System-MN in combination with citrus oils at more than 1 pt/ac or 0.5%, whichever is less or in combination with petroleum oils at more than 2 qts/ac or 1.0%, whichever is less.

#### Spray Applications

Do not apply System-MN with any type of hand, pump or back-pack sprayer. Avoid applying to wet leaf and fruit surfaces. Apply to dry plant surfaces to the point of wet with no run-off. Avoid spraying at temperatures above 85 degrees at time of application during day light hours. For additional information regarding Agro-K products, tank-mixes and spray conditions contact your local Agro-K representative. User assumes full responsibility to ensure product, equipment and plant compatibilities.

#### Limitations, Restrictions, and Exceptions

#### Directions for Commercial Use:

Foliar: Apply 1 to 8 pints per acre with sufficient water for thorough coverage.

Product can be applied at 7 to 14 day intervals for a maximum of 5 times during the growing season
