

FIELD AND SWEET CORN SEED

General Information

I. GENERAL INFORMATION

When applied properly Avipel forms a bird repellent coating on corn seed. Birds may sample treated seeds but they will avoid additional consumption. Thorough, uniform and consistent coverage is essential for full protection from bird depredation. Use only at the recommended labeled rate. Lower amounts may not give desired control.

APPLICATION

RATE: AVIPEL may be applied as a water-based slurry alone, or with other compatible seed treatment materials, or sequentially with other registered, crop protection products. Apply water based slurry through a standard slurry, mist-type or batch commercial treater. Prior to mixing, potential tank mix partners which include pesticides, colorants, dyes and polymers should be tested for physical compatibility with AVIPEL.

Restricted Entry Interval

4 hours

Exception: if the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated areas if there will be no contact with anything that has been treated.
