

SEEDING AND OVERSEEDING

General Information

GENERAL INFORMATION

PRIMER Select SWDG formulation is a blend of non-ionic soil surfactants impregnated onto a spreadable, water dispersible granular carrier. This results in a dry granular formulation that provides performance equal to PRIMER Select SWDG Liquid Formulation with the convenience of spreader application. PRIMER Select SWDG can be safely applied in the spring, before the irrigation system is activated, as well as during the summer when environmental stress conditions may impact turf performance.

Limitations, Restrictions, and Exceptions

SEEDING AND OVERSEEDING

Surface apply Primer Select SWDG at a rate of 1.5 lbs/1000 sq ft (0.6 kg/100 sq m) when preparing soil for seeding.
