

POTATOES (PROCESSING, SEED AND TABLE STOCK)

General Information

StorOx 2.0 works best when diluted with water with minimal levels of organic or inorganic materials, and with water having a neutral pH. Thoroughly rinse out tank with water before mixing concentrate. StorOx 2.0 will readily mix with clean, neutral water and does not require agitation.

StorOx 2.0 concentrate should not be combined or mixed with any other pesticide concentrates.

Limitations, Restrictions, and Exceptions

SPRAY TREATMENTS FOR NEWLY HARVESTED POTATOES BEFORE STORAGE

For control of storage diseases caused by fungi, oomycetes, and bacteria.

Directions

Spray diluted solution on tubers to achieve full and even coverage. The use of additional surfactant is acceptable to aid in sticking. Use ½ to 2 gallons of water per ton of potatoes.
