

# STONE FRUIT AND NUT CROPS

## General Information

### GENERAL DESCRIPTION:

GREEN M..II..L..E.. is specially formulated to provide delivery of critical and important nutrients throughout the season. The sources of nutrients in alfalfa, fish, crab, and poultry waste meal as well as in kelp also promote microbially active soils. Further, soil microbiologists have found the biology of the soil to be of equal to greater importance than mineral constitution alone. The soft fertility characteristics minimize opportunity for phytotoxicity and facilitates use on a variety of crops spanning herbaceous annuals to woody perennials. The product is formulated for mechanical application.

**CAUTION:** The slight hygroscopic properties necessitates storing in a cool, dry location. Also, once placed in an applicator, attempt to dispense this material within 6-8 hours. Consult a technical representative for specific procedures and uses.

## Limitations, Restrictions, and Exceptions

### STONE FRUIT AND NUT CROPS

Depending on analyzed needs, apply between 250-1,000 lbs per acre. Broadcast evenly around the root zone and incorporate mechanically or via irrigation. Increment applications as opposed to applying one treatment.
