

POTATOES - FOLIAGE

General Information

General Information

This is a non-phytotoxic micronutrient solution for foliar and soil application. The complexed metals are highly available and absorbed by leaves and the root system, because of the complexed agent's high complexing ability.

GENERAL RECOMMENDATIONS

PESTICIDE COMPATIBILITY: LIGTRACE GREEN FLUSH is generally compatible with insecticides, herbicides, miticides, fungicides and foliar nutrients. It may be incorporated into existing spray programs. Add micronutrient to water before adding pesticides. It is always advisable to first test for compatibility on a small scale before tank mixing products.

FERTILIZER COMPATIBILITY: This product is compatible with 32% and 28% Nitrogen solutions. Addition of this product to any other type of fertilizer solution, especially concentrates, should not be done without first testing for compatibility on a small scale.

FOLIAR APPLICATION: For best absorption into the plant, apply this product in early morning or late evening. For aerial application use at least 1 gallon of water for every pint of this product applied to the crop. Consult your local farm advisor for information on sensitive varieties and hybrids.

Limitations, Restrictions, and Exceptions

Foliage: In early spring, apply 1 to 2 qts. per acre with sufficient water to give complete coverage. Repeat application within 2 to 4 weeks especially where deficiencies are known to occur.
