

SOIL APPLICATION

General Information

Compatibility: KELP PLUS is compatible with many fertilizers that might be injected through fertigation equipment, however it is impossible to evaluate every potential combination. Always run a jar compatibility test before mixing with liquid fertilizers. This product is compatible with most pesticides commonly used on vegetable, fruit and agronomic crops.

Use this product in accordance with good agronomic practices, which include utilizing proven spray equipment set for proper coverage. Do not make applications when temperatures are too hot, as crop damage may occur. Applications should be made at temperature levels and when other environmental conditions in your area are such that your experience indicates the application will be compatible and will accomplish the desired result.

Fertigation: May be used under normal practices. KELP PLUS should be applied at the end of the irrigation cycle.

Refer in the label for mixing and product dilution information.

Limitations, Restrictions, and Exceptions

DIRECTIONS FOR USE

KELP PLUS maybe used on all annual or perennial crops.

Apply in foliar or root application systems early in the season and continue throughout the entire growing period. Special emphasis should be given during root flush periods and during flowering, fruit set and sizing stages. Use KELP PLUS as a supplement to a well balanced crop management program designed to maximize quality crop production.
