COTTON

General Information

GENERAL INFORMATION

Target 6 Plus is a postemergence herbicide for use in cotton, golf courses, sod farms and highway rights of way. Target 6 Plus contains a surfactant (wetting agent) in proper ratio for best results. It is not necessary to add additional surfactant to the spray tank. Local conditions and recommendations vary; consult an agricultural experiment station or extension service weed specialist for recommendations in your area.

A partial list of weeds controlled with Target 6 Plus includes: barnyardgrass, brachiaria spp., chickweed, cocklebur, crabgrass, dallisgrass, goosegrass, johnsongrass, nutsedge, pigweed, puncture vine, sandbur.

Note to Users: Do not apply this product in Florida except on cotton in the counties listed in the cotton use section of the label. Aerial application is prohibited, except when applying to cotton.

APPLICATION METHODS

Target 6 Plus should be applied with a low-pressure, properly calibrated sprayer having satisfactory pumping and bypass action. ADJUST NOZZLES TO KEEP SPRAY OFF COTTON FOLIAGE AND IN A MANNER TO ALLOW MAXIMUM COVERAGE OF WEEDS. Adequate coverage is very important for effective weed control. Apply during warm weather and when weeds are in an active stage of growth.

Limitations, Restrictions, and Exceptions

COTTON (Postemergent Use Only)

Target 6 Plus is useful as a directed postemergence spray for control of the weeds listed above. Mix Target 6 Plus at the rate of 2.67 pints in 40 gallons of water for application as a DIRECTED broadcast spray to one acre when weeds are small. For band application in 40-inch rows, apply 1 gallon of above diluted spray solution per inch of band width per acre of cotton. Only 1 application at 2 lbs a.i./acre is allowed
per season, except when a salvage operation is needed. Keep spray off cotton foliage.

If a salvage operation is needed (i.e., if pigweed escapes the first application), then a second or repeat application at 2 lbs a.i./acre is allowed. A second or repeat application, if needed, should be timed about 1 to 3 weeks after the first application. Apply only as a salvage operation when cotton is 3 inches high, but no later than 6 inches high or early square, whichever occurs first.

Preference should be given to directed spray. In order to minimize injury, the second application should be made as a directed spray when possible.

Slight burning and a reddish discoloration of cotton foliage may occasionally be seen following the treatment; however cotton plants will develop normally and yield will not be affected.

DO NOT apply within 50 feet of permanent water bodies or aquatic habitat, including, but not limited to, lakes, reservoirs, rivers, streams, marshes, ponds, and estuaries.

DO NOT feed treated foliage to livestock or graze treated areas.

DO NOT apply pre-plant to Cotton.

DO NOT apply in Florida except on cotton grown in the following counties: Calhoun, Columbia, Escambia, Hamilton, Holmes, Jackson, Jefferson, Okaloosa, Santa Rosa, Suwannee, Walton, and Washington counties.
