

VEGETABLE CROPS

General Information

GENERAL DESCRIPTION:

For trees & vines, vegetable & field crops, turf and greenhouse applications. Tilth may be injected through sprinkler systems, in flood or furrow runs, into drip or micro-sprinkler systems, shanked in or sprayed onto the soil surface.

Tilth may be used with liquid nitrogen fertilizer solutions, microbes and certain minor elements. Consult with a field representative for proper rates and possible compatible combinations.

CAUTION:

If Tilth should impinge upon foliage, be sure to wash foliage immediately with water. Flush application equipment with water following each application.

Limitations, Restrictions, and Exceptions

VEGETABLE CROPS

3-25 gpa with periodic maintenance applications of 3 gpa spaced 2-3 times throughout the season.
