

GENERAL BRUSH CONTROL - NONCROPLAND

General Information

GENERAL INFORMATION

Pro-Serve's PRONONE POWER PELLETT HERBICIDE is a pellet of Hexazinone to be used for brush control in reforestation areas, rangeland, pastures, and noncropland areas.

PRONONE POWER PELLETT is an effective general herbicide providing residual control of many woody plants. It is absorbed through the roots.

Moisture is required to activate PRONONE POWER PELLETT in the soil. Best results are obtained when the soil is moist at time of application and 1/4 to 1/2 inch of rainfall occurs within 2 weeks after application.

Woody plants usually respond within 3 to 6 weeks after sufficient rainfall has dissolved the pellet and carried the herbicide into the root zone where it is absorbed during periods of active plant growth. Defoliation and subsequent refoitation may occur, but susceptible plants are killed. The response to the treatment will vary with the amount applied, soil type, rainfall, timing and uniformity of application and other conditions.

USE PRECAUTIONS

Injury to or loss of desirable trees or other plants may result from failure to observe the following: Do not apply, drain or flush equipment on or near desirable trees or other plants, or on areas where their roots may extend, or in locations where the chemical may be washed or moved into contact with their roots. To prevent injury or loss of desirable trees or brushes, measure the distance from the base (trunk) to the dripline of the desirable plant. Multiply this distance by three and do not apply Power Pellets within this distance. DO NOT use on laws, walks, driveways, tennis courts or similar areas. Prevent contact with desirable plants. Keep from contact with fertilizers, insecticide, fungicides and seeds.

APPLICATION: Apply PRONONE POWER PELLET HERBICIDE by hand to the soil around specific plants or in grid pattern for area control.

Make application just before or during the period of active growth of brush species to be controlled. For effective brush control and prevention of damage to desirable vegetation do not apply to brush standing in water.

Limitations, Restrictions, and Exceptions

PRONONE POWER PELLET HERBICIDE is recommended for brush control in noncropland areas such as utility, highway, pipeline and railroad rights-of-way, petroleum tank farms, lumberyards, storage areas, industrial plant sites, the berm of drainage ditches (do not apply to the inside of ditch banks or to inside of banks along waterways) and other similar areas. Apply at 1-2 pellets per inch of stem diameter or as broadcast or grid pattern with rates up to 7,000 pellets per acre.

For multi-stemmed and low-growing brush that have stem diameters that are difficult to determine, apply at 1-2 pellets per 3' of canopy width. For tall, slender brush types, apply 2-4 pellets per 3' of height. Base rate on whichever canopy dimensions is greater. If treating resprouts from brush disturbed by cutting, the rate of application should be based on the original tree size, not the small regrowth.

NOTE: At rates greater than 5,000 pellets per acre, do not cut for forage or hay nor graze domestic animals on treated areas for 1 year. At rates between 600 to 5,000 pellets per acre do not cut for forage or hay nor graze domestic animals on treated areas for 60 days. At rates below 600 pellets per acre there is no restriction on grazing by domestic animals nor on cutting for forage or hay.
