

POST-HARVEST DRENCH, APPLES

General Information

GENERAL RECOMMENDATIONS

Opti-CAL is designed to be applied as a post-harvest drench to apples.

Limitations, Restrictions, and Exceptions

POST-HARVEST DRENCH, APPLES – Apply this product only to high quality apples with intact skins. Application of this product to apples of low quality may result in damage by calcium chloride. Use rate: Up to 2100 ppm calcium (up to 1 part Opti-CAL per 74 parts water) in a drench solution.

Treat fruit immediately after harvest with drench solutions at the same temperature as the fruit to be treated. Use 500 gallons (1893 liters) of drench solution to treat up to 100 tons (90,700 kg) of fruit. Drench fruit for 30 to 60 seconds, then allow solution to drain from fruit.

Do not use bin liners.

Do not combine ethoxyquin with Opti-CAL as fruit damage may occur.

Do not mix Opti-CAL with other products unless safety and compatibility have been established.
