

STONE FRUIT AND VEGETABLES

General Information

PrimaFresh 50-V is a concentrated emulsion of vegetable oil formulated to coat fruit and vegetables, provide shine, and control dehydration and/or loss of firmness. PrimaFresh 50-V may be used as a vehicle for applying post-harvest fungicides.

DIRECTIONS FOR USE

1. Apply PrimaFresh 50-V directly or diluted on previously washed and dried fruit surface.
2. If diluted before application, use soft water. Dilution ratios may be adjusted to suit specific needs.
3. On nectarines, plums, peaches and other round fruits and vegetables, PrimaFresh 50-V is applied by spraying over brushes or rollers at a rate of 1 gallon (3.8 liters) of concentrate per 20,000 - 25,000 pounds (9100 - 11,300 kg) of fruit.
4. If mixing with post harvest fungicides, agitate continuously. May be injected into aqueous fungicide mixture.
