

AS A SOIL WETTING AGENT - TURF

General Information

- Superior spreading action enables coverage of virtually any leaf surface
- Reduces surface tension to an amazing 25 dynes/cm
- Helps mix wettable powders, preventing clogged nozzles and screens
- Compatible with most all spray tank mixes even containing fertilizers
- Prevents foam when added first to the spray tank mix
- The most reliable choice for growers since 1979

Limitations, Restrictions, and Exceptions

As a soil wetting agent:

Turf - Golf Course Tees, Greens and Fairways

Apply 3 oz. per 1000 sq. ft. early spring then repeat application at 2 oz. per 1000 sq. ft. every 4-6 weeks in sufficient water for good coverage to overcome hydrophobic soil condition.
