

AS A DEW CONTROL AGENT

General Information

- Superior spreading action enables coverage of virtually any leaf surface
- Reduces surface tension to an amazing 25 dynes/cm
- Helps mix wettable powders, preventing clogged nozzles and screens
- Compatible with most all spray tank mixes even containing fertilizers
- Prevents foam when added first to the spray tank mix
- The most reliable choice for growers since 1979

Limitations, Restrictions, and Exceptions

As a dew control agent:

Apply 2 oz. per 1000 sq. ft. of turf area in sufficient water for good coverage.
