

## **FOR DIRECT INJECTION INTO DUMP TANKS, ETC.**

### General Information

HDH Peroxy works best when diluted with water containing low levels of organic or inorganic materials, and with water having a neutral pH. Thoroughly rinse out tank with water before mixing concentrate. HDH Peroxy will readily mix with clean, neutral water and does not require agitation. Do not combine with any other pesticide or fertilizer, HDH Peroxy is formulated with a minimal amount of surfactant for plants having waxy or hairy surfaces. Additional surfactant may be added, if needed. The use of additional surfactant is acceptable. HDH Peroxy works by surface contact with the plants and materials being treated. It is important to ensure that all surfaces are thoroughly wetted.

HDH Peroxy does not produce any visible residue, distinct odor or deleterious effects to plants or to postharvest commodities when used in accordance with label directions. Do not use at higher than recommended dilution rates as leaf burn may result. Do not apply this product through any irrigation system unless directed by the label; refer to Chemigation Directions for Use.

Refer the label of agricultural crops.

### Limitations, Restrictions, and Exceptions

For direct injection into dump tanks, hydro coolers and process waters-

For treatment of water containing plant pathogens, inject HDH Peroxy and maintain a predetermined residual level by using metering equipment, coupled with ORP measuring probes.

- 1) Determine biological organic loading prior to treatment if possible.
- 2) For waters that contain low levels of biological and organic loading inject Product at 2.5 fl. oz. - 1.25 fl. oz. of HDH Peroxy for every 100 gallons of water or at a dilution rate of 1:5000-10,000,

3) For clean water inject Product at 1.25 fl. oz. - 0.625 fl. oz. of Product for every 100 gallons of water or a dilution rate of 1:10,000- 1:20,000 to prevent the formation of algae, bacteria and fungi.
