

VEGETABLES AND FRUIT TREES

General Information

GENERAL INFORMATION

MANNI-PLEX products are specifically formulated for foliar delivery of micronutrients.

CHEM-EXTRA K may effectively be applied with many agricultural chemicals. For unfamiliar tank mix combinations sufficient evaluation to determine efficacy and crop safety may be warranted. Avoid tank mixing with phosphate and/or excessively alkaline based fertilizer solutions. Use a minimum 10 gallons of water per acre with ground spray equipment and a minimum of 2 gallons for aerial application. Optimum rate of application will vary depending on your soil properties such as soil pH, organic matter content, soil texture, weather conditions, time of year, general crop health and species. For best results, follow soil test or plant analysis recommendation.

Limitations, Restrictions, and Exceptions

Vegetables and Fruit Trees

Apply 2-5 quarts CHEM-EXTRA K per acre per application. When applying CHEM-EXTRA K on vegetable crops, use a sufficient volume of water to ensure thorough coverage. A minimum of 10 gallons per acre is recommended.
