

GENERAL USE - TRANSPLANTING

General Information

GENERAL INFORMATION

This formula is excellent for foliar application on pasture, vegetables, row crops, trees and turf grass. High urea and very good solubility make this an especially effective fertilizer.

Balanced nutrition is essential to optimum plant growth and yield. The addition of CNI AgriMinerals Energy Booster, a special blend of EDTA Chelated micronutrients and other nutritional components, can help to supply key micronutrients needed to achieve top performance. The recommended rate of Energy Booster should be used as shown on the label.

COMPATIBILITY: CHEM-SOL ALL SEASON FOLIAR is compatible with most pesticides commonly used on row crops including Glyphosate applications. Do not use with highly alkaline spray materials. Add CHEM-SOL ALL SEASON FOLIAR to the spray tank when it is at least half full. Agitation is suggested to increase the speed of solubility.

Limitations, Restrictions, and Exceptions

For transplanting dissolve 5 lbs per 100 gallons of water.
