

BROADCAST - MAINTENANCE

General Information

CHEM-STARTER LIQUID ZINC is specifically formulated for use in high phosphate materials such as 10-34-0 which are commonly applied in the row as a “Starter’ or Pop-up” fertilizer.

CHEM-STARTER LIQUID ZINC contains citric acid which helps solubilize soil phosphate and maximize phosphorus up-take by crops. It is ideal for use in “minimum” and “no-till” starter solutions.

CHEM-STARTER LIQUID ZINC is designed for soil application only. Foliar applications may result in foliage burn. It can be used in fluid fertilizers, most nitrogen solutions and impregnated on dry blend fertilizer. It is compatible with most pesticides. Always make a small-scale test to assure compatibility.

RECOMMENDED RATES

The optimum rate and timing of application will depend on local conditions and should always be made as result of soil/or plant tissue analysis in consultation with your local authorities.
