

CORN - FOLIAR APPLICATIONS

General Information

NutriSol Boron UN is a formulation for use in soil and foliar applications on crops requiring Boron. NutriSol Boron UN contains Urea based Nitrogen and can be used in liquid fertilizers, suspensions or in water and is compatible with most pesticides and fertilizers. Boron primarily regulates carbohydrate metabolism in plants. It is an essential element for protein synthesis, seed and cell wall formation, germination of pollen grains and growth of pollen tubes. Boron also aids in sugar translocation.

DIRECTION FOR USE

This product is compatible with most pesticides and fertilizers. However, a test for compatibility is recommended prior to large scale mixing. Always add NutriSol Boron UN to water prior to large scale mixing. Do not apply in aqua ammonia.

Limitations, Restrictions, and Exceptions

FOLIAR APPLICATIONS: NutriSol Boron UN can be foliarly applied. Apply 2-4 quarts per acre by ground or air in enough water to provide maximum coverage. A nonionic surfactant can be utilized to enhance coverage and translocation. For crops requiring multiple Boron applications above 4 quarts per acre, allow 14 to 21 days between applications. For foliar applications, NutriSol Boron UN can be applied alone or in tank mixes with agricultural chemicals and fertilizers. The use of tissue tests is highly recommended to monitor levels of boron in the crop. Tissue tests will serve as an aid to establish and maintain correct levels of Boron for optimum plant growth and it will help in avoiding over application that can be detrimental to the crop.
