

# **POTATOES**

## General Information

### General Information

FERTI-GRO 4-16-4 can be applied to potatoes, sugar beets, most vegetable and row crops, deciduous fruit and nut trees, citrus, avocados, grapes, melons, ornamentals, turf, grains, pasture, range and annual grasses.

FERTI-GRO 4-16-4 liquid plant food contains primary plant nutrients and some micronutrients - which are chelated with EDTA - to provide for rapid assimilation into the plant's system.

FERTI-GRO 4-16-4 liquid fertilizer is formulated to provide a fast method to: 1) boost plant growth during critical or high-growth periods; 2) prevent damage due to weather; and 3) correct nutrient deficiencies.

FERTI-GRO 4-16-4 is processed with agents aiding in spray tank wetting and disbursement. It will disperse in water with minimum agitation.

Soil applications with other liquid fertilizer: FERTI-GRO 4-16-4 may be combined with other liquid fertilizer. Use a minimum of 5 gals. of water when mixing with UAN-32 and other liquid fertilizers.

Broadcast or row applications are acceptable, although greater efficiency may be expected from row application. Trace elements should be added to pre-plant fertilizer.

### Limitations, Restrictions, and Exceptions

Foliar applications: Apply FERTI-GRO 4-16-4 with 20 gals. of water per acre through conventional sprayers. When using low volume equipment or aerial application, 5 to 10 gals. of water per acre is usually sufficient. This product can be used in combination with other chelate/citrate-based products and/or many pesticides.

Potatoes: 1 to 2 qts. per acre at golf ball size tubers, and 2 to 3 qts. per acre 3 weeks prior to vine kill.
