

# **BLUEBERRIES, CRANBERRIES, CANEBERRIES**

## General Information

## General Information

\*Ferti-Phite 0-29-26 is a foliar nutritional spray which is intended to be used as a supplemental fertilizer treatment to a regular fertilizer program. Upon foliar application, the phosphite ions are taken up directly by the plant foliage and may undergo a degree of conversion to phosphate ions, or will be used directly by plants, as phosphite ions. As a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops may be observed. In addition, placement close to seeds or root zones may be injurious to crops. The effect may be aggravated by a soil pH below 6.5. Application Information

When applied by concentrate or dilute ground sprayers, use with a minimum of 15 gallons of water per acre. When used in aerial applications, use at least 5 gals. of water per acre. Control drift of this or other agricultural sprays. If nitrogen is needed, add 10 lbs. of low biuret urea to 100 gals. of water.

## Limitations, Restrictions, and Exceptions

Additional applications may be made every 3 to 4 weeks thereafter or as needed.
