

SORGHUM

General Information

General Information

*Ferti-Phite 0-29-26 is a foliar nutritional spray which is intended to be used as a supplemental fertilizer treatment to a regular fertilizer program. Upon foliar application, the phosphite ions are taken up directly by the plant foliage and may undergo a degree of conversion to phosphate ions, or will be used directly by plants, as phosphite ions. As a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops may be observed. In addition, placement close to seeds or root zones may be injurious to crops. The effect may be aggravated by a soil pH below 6.5. Application Information

When applied by concentrate or dilute ground sprayers, use with a minimum of 15 gallons of water per acre. When used in aerial applications, use at least 5 gals. of water per acre. Control drift of this or other agricultural sprays. If nitrogen is needed, add 10 lbs. of low biuret urea to 100 gals. of water.

Limitations, Restrictions, and Exceptions

SORGHUM: Apply 1 to 4 qts. per acre to the foliage or soil. For best results split application as follows. Apply 1 to 2 qts. per acre to the foliage or soil (band) within 3 weeks of emergence. Apply 1 to 3 pts. per acre with each pesticide application prior to bloom.
